

Attorney's Docket: 2000DE441  
 Serial No.: 09/993\_590  
 Art Unit 1714

-31-

in which  $R^{50}$  is  $C_4$ - $C_{80}$ -alkyl or -alkenyl,  $R^{51}$  is ethoxy and/or propoxy,  $n$  is a number from 5 to 100, and  $p$  is a number from 0 to 50.

[0093] Finally, in a further embodiment of the invention, the additives according to the invention are used together with comb polymers. These are taken to mean polymers in which hydrocarbons radicals having at least 8, in particular at least 10, carbon atoms are bonded to a polymer backbone. These are preferably homopolymers whose alkyl side chains contain at least 8 and in particular at least 10 carbon atoms. In the case of copolymers, at least 20%, preferably at least 30%, of the monomers have side chains (cf. Comb-like Polymers-Structure and Properties; N.A. Platé and V.P. Shibaev, J. Polym. Sci. Macromolecular Revs. 1974, 8, 117 ff). Examples of suitable comb polymers are, for example, fumarate-vinyl acetate copolymers (cf. EP 0 153 176 A1), copolymers of a  $C_6$ - $C_{24}$ - $\alpha$ -olefin and an N- $C_6$ - $C_{22}$ -alkylmaleimide (cf. EP 0 320 766), furthermore esterified olefin/maleic anhydride copolymers, polymers and copolymers of  $\alpha$ -olefins and esterified copolymers of styrene and maleic anhydride.

[0094] Comb polymers can be described, for example, by the formula

B
